

PETITION FOR FOREIGN FILING LICENSE UNDER 37 CFR 5.13 (DRAFT — PRIVATE)

What this is: the express petition to the USPTO for a foreign filing license when NO corresponding US application has been filed (37 CFR 5.13), so the UK filing can proceed legally for a US-made invention (35 USC 184). Submit via USPTO Patent Center (electronic — avoid the paper-filing penalty). Attach the technical material to be filed abroad (the `UKIPO-FILING.md` description). NOT legal advice; a US patent attorney should glance at this before submission given the stakes (a bad foreign filing bars the US patent under §185).

To: Licensing and Review, United States Patent and Trademark Office

Re: Petition for Foreign Filing License under 35 U.S.C. 184 and 37 CFR 5.13 — request for expedited handling

Petitioner / Inventor: William Glynn **Residence / where invention was made:** South Dennis, Massachusetts, United States **Citizenship:** United States **Entity status:** Micro entity (individual inventor, named on fewer than four prior US non-provisional applications, gross income below the USPTO threshold). Micro-entity certification (form SB/15A) submitted herewith. **Correspondence:** willglynn123@gmail.com

Petition

1. The petitioner is the sole inventor of an invention made in the United States, titled: *Method and system for earned, non-transferable consensus standing on a distributed contribution ledger, with strategyproof valuation and eclipse-resistant weighted finalisation.*
2. **No corresponding application has been filed in the United States.** This petition is therefore made under 37 CFR 5.13.
3. The petitioner intends to file an application directed to this invention with the United Kingdom Intellectual Property Office, and requests a foreign filing license under 35 U.S.C. 184 authorising the export and filing of the invention abroad.
4. **Nature of the subject matter:** the invention is a software / computer-implemented method in the field of distributed-ledger and applied-cryptography systems (cryptographic hashing, commit-reveal authorship, digital-signature-based ownership, and a weighted-vote consensus computation). It is not directed to any weapon, munition, or item on a controlled-technology list, and the petitioner is not aware of any subject matter the disclosure of which would be detrimental to national security.
5. A copy of the material intended to be filed abroad accompanies this petition (the description titled as in paragraph 1), for the Office's security screening.
6. **Expedited handling is requested.** The petitioner submits the required fee under 37 CFR 1.17 for expedited handling of a foreign filing license.
7. The petitioner requests that the Office grant the foreign filing license and so indicate, so that the corresponding application may be filed with the United Kingdom Intellectual Property Office.

Respectfully submitted,

Date: June 12, 2026 William
Glynn, sole inventor / petitioner

Enclosures

1. This petition.
2. The technical material to be filed abroad (the UKIPO-FILING.md description).
3. Micro-entity certification (SB/15A).
4. Fee for expedited handling of a foreign filing license (37 CFR 1.17).

Notes before submission (honest, confirm at checkout)

- **Fee:** Rodney's AI gives the FFL fee as Micro \$47 / Small \$94 / Large \$235. My own check confirmed the petition + expedited-handling fee exists under 37 CFR 1.17 but did not independently verify the exact dollar figure or the precise sub-paragraph; confirm the line and amount on the current USPTO fee schedule at the Patent Center checkout before relying on "\$47". Either way it is tens of dollars, not hundreds.
- **Timeline:** ~3 business days is the typical processing speed, and there is no premium to "fast-track" it (the screen is the standard process). But this is **cryptographic software**, which is the category most likely to draw a closer national-security look; plan for "usually ~3 days, possibly longer," and do not file the UK until the license is granted (the grant will be indicated by the Office).
- **File electronically** through USPTO Patent Center or by the designated fax to Licensing and Review; paper mail can incur a non-electronic-filing penalty.
- **Sequence:** FFL granted → then file the UK Noesis-UKIPO-description.docx . Do not reverse the order.

- **Inventorship / where-made:** this assumes the invention was made in the US by you. That is the hinge for whether §184 even applies; it does if the inventive work was done in the US.
